Summary

Engineer with 13+ years who owns products from idea to production: data model, backend, UI, infrastructure and the users. Six and a half years at BreezoMeter (acquired by Google) building and operating Python APIs and data pipelines from early startup onwards. Since 2024 I have built and run my own products end to end — a Next.js/React language-learning app with payments, more than a dozen live web apps on Cloudflare, and voice agents on realtime speech APIs — working daily with Claude Code and Codex as a force multiplier while keeping the bar on quality.

Core skills

- **Languages:** TypeScript / JavaScript, Python, Rust, Bash
- **Frontend:** React, Next.js, phone-first UI, PWAs, Capacitor (Android)
- **Backend & data:** REST APIs, Node.js, PostgreSQL (Prisma), SQLite/D1, Redis, data pipelines, cron and queue workers
- **AI & voice:** Claude / OpenAI / Gemini APIs, realtime voice (WebSocket audio, tool calls), agentic workflows, MCP, evaluation of model output
- **Cloud & delivery:** AWS, GCP, Cloudflare Workers, Docker, Kubernetes, CI/CD, Sentry and production observability

Experience

Independent Software Engineer

Jan 2024 – Present · Lisbon, Portugal

- **Lingush** (lingush.com) — language-learning product I own end to end: Next.js/React front end, Postgres via Prisma, NextAuth, Stripe payments, Sentry, an Android build with Capacitor, and a Python audio pipeline for podcast transcription, translation and TTS.
- **Voice agents** — **Jarvis**, a voice front end over provider realtime APIs (OpenAI, Gemini, Grok) streaming PCM audio over WebSockets and routing tool calls to coding agents; **Jarvis Arena** (jarvis-arena.kapps.dev), which runs scripted voice-agent conversations on Cloudflare and records pass/miss per step and cost; **talkui**, a UI that changes as you talk to it.
- **A dozen-plus live web apps**, each designed, built and operated alone, phone first: podqast.app (podcast player), niuz.app (news reduced to sourced points, confirmed across outlets), korrents.com, ppll.app, rcmnd.app, howtolearn.app. Cloudflare Workers + D1, crons, LLM pipelines with per-app cost budgets, and analytics I use to decide what to build next.
- Developer tooling in Rust and TypeScript: a phone-first web client for AI coding agents (**ttyview**, **tmux-web**), a published CLI (**cc-usage-json**).

Stack: **TypeScript** · **React/Next.js** · **Python** · **Rust** · **Postgres** · **Cloudflare** · **Claude/OpenAI APIs**.

Check Point Software Technologies — Software Developer

Nov 2022 – Jan 2024 · Israel (hybrid)

Python development for security products. Built and maintained data pipelines across AWS, Azure and Docker.

Changebase — Software Developer

May 2021 – Oct 2022 · Israel

Backend software development.

BreezoMeter (acquired by Google) — Software Developer

Oct 2014 – Apr 2021 · Israel · 6 yrs 7 mos

- Python backend engineering for environmental-data APIs (air quality, pollen) used by major automakers and health companies.
- Designed, built and operated algorithmic services and data pipelines in a microservices architecture on GCP for 6.5 years, from early-stage startup through to the Google acquisition.
- DevOps across Docker, Kubernetes, CI/CD and SQL/NoSQL stores.

Core stack: **Python · Docker · Kubernetes · SQL · NoSQL · GCP.**

500Tech — Ruby on Rails Developer

Jul 2013 – May 2014 · Israel

Full-stack web development for startups: Ruby on Rails, AngularJS/EmberJS, MySQL/PostgreSQL, Heroku.

Linnovate — Web Developer

Mar 2012 – Jun 2013 · Israel

Web development for government and enterprise clients: PHP, Drupal, MySQL, MongoDB, Jenkins.

Technion (Israel Institute of Technology) — Linux System Administrator

Mar 2008 – Apr 2011

Linux infrastructure and user support for a university computer lab.

Education

BSc, Information Systems — University of Haifa · 2008 – 2011

Languages

English (fluent) · Hebrew (native) · Portuguese (learning)
